

Instructions for Adding Your Affiliate Links to Rebrandable **Hot at Home** Reports

- Double-click PDFBrand.exe to start the program.
- Drag 'n' Drop the "Rebrandable" Hot at Home PDF file into the program's main window. Alternatively you can use the "File >> Open..." command (or the icon from the menu bar) and browse to your PDF. Once the brander has successfully processed and opened the file, you'll see an area where you can fill in your clickbank id.

- Simply fill in your clickbank id where indicated.

- If you make an error, as long as you haven't yet saved the document, you can choose to correct any data you entered by simply clicking into the field you want to change and entering a new value for it, overwriting the existing data.
- Once you're done, *hit the “**Brand!**” button* and the Brander will brand the pdf.
- Then, the Brander will *remind you to save a copy of the file* under the name “yourfile_branded.pdf” in the same location as the original pdf. If you want to save the branded pdf under a different filename or in a different location, just overwrite the existing information in the save box by entering a new name for it and/or choosing a different directory, then choose "save".
- After saving the branded file, open it using Adobe Acrobat or any other pdf reader. Click on the links and see if they work as they should.
- Once you've made sure everything was rebranded properly, you can distribute your new Rebranded Hot at Home Report and anyone clicking a link from within the report will be sent to the **Hot at Home** sales page through YOUR affiliate link. And, if they purchase YOU make the commission!
